Can the galaxy s9 battery be replaced

If you see this page, the nginx web server is successfully installed and working. Further configuration is required. For online documentation and support please refer to nginx.org. Commercial support is available at nginx.com. Thank you for using nginx. You'll be given a one-hour window, confirmed by email & SMS, detailing when your Samsung Repair technician will arrive. To reassemble your device, follow these instructions in reverse order. If possible, turn on your phone and test your repair before installing new adhesive and resealing the phone. For optimal performance, calibrate your newly installed battery: Charge it to 100%, and keep charging it for at least two more hours. Then, use it until it shuts off due to low battery. Finally, charge it uninterrupted to 100% Take your e-waste to an R2 or e-Stewards certified recycler. Repair didn't go as planned? Check out our Answers community for troubleshooting help. If you get stuck or have questions, you can post a comment. We'd be happy to help. 14 steps To loosen the back cover, use a heat gun or an ordinary hair dryer. Warm glue is easier to loosen, allowing you to remove the back cover. The easiest way to loosen the back cover is to use a flat and flexible tool such as the iPlastix or Flex. You will also need several picks to unstick the back cover all around. Heat the spot where you start and place a suction cup on the bottom of the back cover. Press a flat tool between the back cover and the frame and pull on the suction cup. The iPlastix is made of plastic, so it won't scratch the device. On the other hand, it's very soft and tricky to insert. Be extra careful, the back cover can break very easily. If necessary, apply the heat several times and try again. Removing the back cover might take half an hour. Take a little more time and work carefully to make sure you don't break anything. Once the tool is inserted, stick a pick into the gap to keep it open. Then run the tool around the entire edge to gradually loosen the glue. Then heat the next part and insert the picks one by one. The back cover glue is extra strong on the lower edge. Once the back glass is loosened everywhere, you should only lift it slightly, because the fingerprint sensor, which is located under the camera, still connects the back glass and the circuit board with a very short cable. You will loosen this in the next step. With the right tools, you will succeed in any repair. In our store you will find a large selection of professional quality tools. I realize as my phone ages the battery will get worse. Is there a way to test my S9 and replace it? I will have to break the waterproof seal from my understanding.
